models

index.ts

```
export * from './entry'
```

Entry.ts

```typescript
import mongoose, { Model, Schema } from "mongoose";
import { Entry } from "../interfaces";

export interface IEntry extends Entry {}

const entrySchema = new Schema({
    description: { type: String, required: true },
    createdAt: { type: Number },
    status: {
        type: String,
        enum: {
            values: ['pending', 'in-progress', 'finished' ],
            message: '{VALUE} no es un estado permitido'
        },
        default: 'pending',
    }

});

const EntryModel: Model<IEntry> = mongoose.models.Entry || mongoose.model('Entry',
entrySchema);

export default EntryModel;
```
